Field of application

Type ERDH filter elements of filtration grades ZN, XN and XXN in TC version (high temperature and chemical resistant) or EX version (like TC, but additionally with electrical conductivity between all parts of the element and connection for protecting earth) provide the opportunity to use our high performance, energy efficient and safe to operate filtration technology also in domnick-hunter series Oil-X Plus filter housings. We recommend the following filtration grade assignment:

	FST GmbH	domnick-hunter
General purpose	ZN	AO, AR
Fine	XN	AA, AAR
Super fine	XXN	AX

Features

Type ERDH filter elements of filtration grades ZN, XN, XXN consist of a pleated depth filter media and a separately located drainage media. The two functional layers are compactly located between the two stainless steel cylinders and therefore completely integrated in the filter element.

Thanks to the pleating technology the effective filter surface is increased many times resulting in a higher dirt holding capacity and a longer service life. At the same time the flow resistance and therefore differential pressure generated by the filter element is considerably reduced. Due to the separation of the two function units, filtration and drainage, which are both fundamental for the filter element, the function of the remaining layer is guaranteed even if one filter layer breaks. To avoid a breakthrough at an early stage, the pleated depth filter cylinder has two or more layers. In addition, it is provided with a pleated supporting fabric on the inside and outside. All media are located within the two stainless steel cylinders. In this way, breaking off completely or in parts of the filter layer used for filtration is impossible.

All the features mentioned above are a contribution to a filter element which has a high performance (high separation efficiency) combined with economic efficiency (low differential pressure) and maximum operating safety (integrated design).

Basic data

Model	Nominal volume flow (VN) ^{*1}	Max. operating pressure	Min./Max. operating temperature
ERDH145	522 m ³ /h (1.28)	---	Constant 2°C - 100°C Short time 2°C - 120°C
ERDH220	792 m ³ /h (1.39)		
ERDH330	1,188 m ³ /h (1.00)		
ERDH620	2,232 m ³ /h (1.34)		

*1 – refers to 1 bar(a) and 20°C at 7 bar operating pressure

The factor in brackets specifies the relation of the flow of the filter element for each cm² of surface compared to the EFST30 reference element.

Purity classes according to ISO 8573-1

Contamination	ZN	XN	XXN
Solid particles ^{*2}	Class 2	Class 1	Class 0-1
Water content	---	---	---
Total oil content ^{*2 *3}	Class 2	Class 1	Class 0-1

*2 - typical result, on the assumption of suitable inlet concentrations as well as operating and marginal conditions.

*3 - the amount of oil vapour is not taken into account and may reduce the purity class.

Calculation of the converted volume flow

Converted volume flow VK	Nominal required volume flow VN _{min}
$VK = VN \times F1 \times F2$	$VN_{min} = VK / F1 / F2$

VK : Converted volume flow calculated for the operating conditions

VN_{min}: Nominal required volume flow calculated for the operating conditions, based on the volume flow at operating conditions

*4 - measured at 7 bar operating pressure and at nominal volume flow, model EFST30

*5 - measured referring to ISO 12500-3 at 7 bar and at nominal volume flow, model EFST30, MPPS - Most Penetrating Particle Size

*6 - measured according to ISO 12500-1, model EFST30, oil test aerosol with viscosity of 32 mm²/s, inlet concentration 10 mg/m³

Materials

Component	
Depth filter media	Glass fibre
Drainage media	PES (polyester)
Supporting fabric of depth filter media	Nylon
Bonded joint	Epoxy
Cylinders	Stainless steel 1.4301
End caps	Stainless steel 1.4301
Sealing materials	Viton
